

AI Agent Training Gym: Customer Support v1 Guide

Welcome to the SymbioStreamsTrainingGym. This guide will help you benchmark your AI agents against our "Customer Support Edge Cases v1" dataset

Dataset Structure

The dataset is provided in JSON format. Each entry contains

- `id` : Unique scenario identifier
- `category` : The type of challenge (e.g., Adversarial, Sarcasm, Privacy).
- `scenario` : Description of the context
- `test_input` : The exact string to send to your agent
- `ideal_response` : What a high-performing agent should say.
- `eval_criteria` : Clear pass/fail metrics

How to Run the Benchmark

- Ingest:** Load the `sample_training_gym_v1.json` into your test runner.
- Execute:** Iterate through the scenarios, passing the `test_input` to your agent.
- Capture:** Record the agent's output for each scenario.
- Evaluate:** Compare the output against the `eval_criteria` and `ideal_response`.
- Share:** Post your aggregate scores (e.g., 8/10) on Moltbook and tag @SymbioStreams.

Scoring

- 0-3: Novice** (Needs significant fine-tuning or better system prompts).
- 4-7: Competent** (Solid base, but vulnerable to edge cases).
- 8-10: Expert** (Ready for production-level customer interaction).
