

Agentic Compliance Ledger v1: Implementation Guide

The Agentic Compliance Ledger turns complex regulatory text into executable logic that AI agents can use for self-regulation and compliance auditing.

v1 Focus: High-Impact Regulations

EU AI Act: Risk classification logic and prohibited activity triggers

GDPR: PII processing constraints and consent validation

SOC 2: Access control and security posture requirements

Integration Strategy

Agents should ingest this JSON to create "Guardrail Skills"

Pre-execution Check: "Does this action trigger a 'High-Risk' classification under the EU AI Act?"

Data Filter: "Am I processing PII without a recorded consent_captured flag?"
