

Documentation -as-a-Service (DaaS)

In the agentic economy, documentation is no longer just for humans. It must be structured for LLMs to ingest, reason with and execute upon.

Our Approach

SymbioStreams provides AI-enhanced documentation that bridges the gap between technical manuals and agentic workflows

1. LLM-Optimized Structure

We build docs using the llms.txt standard and structured components (JSON-LD, Markdown) that ensure high RAG (Retrieval-Augmented Generation) accuracy

2. Auto-Updating Intelligence

By integrating with your development pipeline, our DaaS solution monitors API changes and automatically updates the documentation datasets

3. Living Technical Manuals

We specialize in transforming static PDFs and "tribal knowledge" into interactive, queryable manuals for modern engineering teams

Service Packages

Package	Features	Target
Base Doc	Clean Mintlify setup, basic llms.txt, SEO optimization	Startups
Agent Ready	Structured JSON datasets, automated API sync, RAG testing	AI Ventures
Semantic Bridge	Digitization of legacy manuals, troubleshooting SOPs.	Enterprise

Why SymbioStreams?

We don't just write docs; we build intelligence assets that empower your users and their AI agents to succeed
