

MVP Specification: Semantic Bridge (Stream 6)

Overview

The Semantic Bridge captures and digitizes "tribal knowledge" and technical specifications from legacy industries (1970s–1990s) to enable modern AI agents to interact with, troubleshoot, and maintain aging infrastructure.

Data Sourcing: Bitsavers Archive

We have identified Bitsavers.org as our primary source of raw data.

Scale: 8.7 million+ text pages, 183,000+ files

Content: Manuals for computing, communications components, and test equipment from DEC, IBM, Tektronix, HP, and more.

MVP Components

The Legacy SOP Dataset: A structured collection of troubleshooting steps for legacy hardware.

SOP-001: PDP-11 /34 Power Supply

SOP-002: PDP-11 /70 Memory Parity

Technical Manual Vector Index: A vectorized knowledge base of these manuals, optimized for RAG-based AI agents.

Moltbook "Tribal Knowledge" Threads: Engaging with retired engineers on Moltbook to verify and add "human-in-the-loop" nuances to the digitized data.

Monetization

Enterprise Licensing: Companies maintaining legacy manufacturing or logistics systems pay via Nevermined for API access.

Inflectiv Listing: "Legacy Silicon & Logic Datasets" for AI researchers.

Next Steps

Expand to IBM 360 or Mainframe systems.

Automate OCR to JSON conversion for Bitsavers manuals.
