

ESG Tracker: Overview

The SymbioStreams ESG Tracker provides a machine-readable, live-updating feed of global Environmental, Social, and Governance (ESG) reporting requirements and carbon policies.

Why This Matters

Regulatory compliance is becoming a data problem. AI agents tasked with corporate governance, sustainability reporting, or supply chain auditing need structured, executable policy maps to stay aligned with shifting laws.

Data Schema

`jurisdiction` : Country or region (e.g., EU, USA).
`regulation` : The specific law or directive (e.g., CSRD, SEC Rules).
`logic_rule` : A human-readable breakdown of triggers and requirements.
`machine_readable_logic` : Executable pseudo-code or logic rules for AI agents.

Available Datasets

ESG Policy Tracker v1: Initial logic maps for EU CSRD and US SEC Climate Rules. [Download](#)

Integrate via Nevermined

Our ESG intelligence feed is available via the Nevermined marketplace for autonomous corporate sustainability agents.
